**High Price**-Carl Hart 2013-06-11 High Price is the harrowing and inspiring memoir of neuroscientist Carl Hart, a man who grew up in one of Miami’s toughest neighborhoods and, determined to make a difference as an adult, tirelessly applies his scientific training to help save real lives. Young Carl didn’t see the value of school, studying just enough to keep him on the basketball team. Today, he is a cutting-edge neuroscientist—Columbia University’s first tenured African American professor in the sciences—whose landmark, controversial research is redefining our understanding of addiction. In this provocative and eye-opening memoir, Dr. Carl Hart recalls his journey of self-discovery, how he escaped a life of crime and drugs and avoided becoming one of the crack addicts he now studies. Interweaving past and present, Hart goes beyond the hype as he examines the relationship between drugs and pleasure, choice, and motivation, both in the brain and in society. His findings shed new light on common ideas about race, poverty, and drugs, and explain why current policies are failing.

In doing so, it addresses key questions of drug use and addiction through interdisciplinary, predominantly sociological and criminological, perspectives, mapping and building on recent conceptual and empirical advances in the field. These include questions of materiality and agency, the social constitution of disease and neo-liberal subjectivity and responsibility. This book provides a fresh scholarly perspective on drug use and addiction by collecting top quality original work, written by a mix of international leaders in the field and emerging scholars working at the cutting edge of research.

**Inside the Digital Revolution**-Bridgette Wessels 2016-05-23 In this work, Bridgette Wessels offers a unique insight into the ways in which core public institutions and powerful organizations develop digital communications and services within the public realm. The book draws on her ethnographic research with the London Metropolitan Police Service during their engagement in an innovative project to improve communication with the public using digital technology. As one of the largest, most advanced and highly respected police services in the world, working in a socially, culturally and demographically complex city, the Metropolitan Police Service offers a highly revealing case study of technology and the human processes which it is designed to serve. The ethnographic research is used to develop a new theoretical and conceptual framework for understanding the relationship between social action and technological change, addressing the way in which technology is socially shaped and culturally informed. The book also discusses the role of ethnography as a tool for researching complex multi-perspective, multi-sited networks of the innovation of digital technologies as forms of communication in late modern western society.

**The Denial of Death**-ERNEST. BECKER 2020-03-05 Winner of the Pulitzer prize in 1974 and the culmination of a life's work, The Denial of Death is Ernest Becker's brilliant and impassioned answer to the 'why' of human existence. In bold contrast to the predominant Freudian school of thought, Becker tackles the problem of the vital lie - man's refusal to acknowledge his own mortality. The book argues that human civilisation is a defence against the knowledge that we are mortal beings. Becker states that humans live in both the physical world and a symbolic world of meaning, which is where our 'immortality project' resides. We create in order to become immortal - to become part of something we believe will last forever. In this way we hope to give our lives meaning. In The Denial of Death, Becker sheds new light on the nature of humanity and issues a call to life and its living that still resonates decades after it was written.

**Cafe Society**-Barney Josephson 2009-03-12 Set against the drama of the Great Depression, the conflict of American race relations, and the inquisitions of the House Un-American Activities Committee, Cafe Society tells the personal history of Barney Josephson, proprietor of the legendary interracial New York City night clubs Cafe Society Downtown and Cafe Society Uptown and their successor, The Cookery. Famously known as "the wrong place for the Right people," Cafe Society featured the cream of jazz and blues performers--among whom were Billie Holiday, Big Joe Turner, Lester Young, Buck Clayton, Big Sid Catlett, and Mary Lou Williams--as well as comedy stars Imogene Coca, Zero Mostel, and Jack Gilford, the boogie-woogie pianists, and legendary gospel and folk artists. A trailblazer in many ways, Josephson welcomed black and white artists alike to perform for mixed audiences in a venue whose walls were festooned with artistic and satiric murals lampooning what was then called "high society." Featuring scores of photographs that illustrate the vibrant cast of characters in Josephson's life, this exceptional book speaks richly about Cafe Society's revolutionary innovations and creativity, inspired by the vision of one remarkable man.

**Drugs, Society and Human Behavior with Annual Editions Online**-Oakley S. Ray 1999-01-01

**Drug Use for Grown-Ups**-Dr. Carl L. Hart 2021-01-12 "Hart's argument that we need to drastically revise our current view of illegal drugs is both powerful and timely . . . when it comes to the legacy of this country's war on drugs, we should all share his outrage." —The New York Times Book Review From one of the world's foremost experts on the subject, a powerful argument that the greatest damage from drugs flows from their being illegal, and a hopeful reckoning with the possibility of their use as part of a responsible and happy life Dr. Carl L. Hart, Ziff Professor at Columbia University and former chair of the Department of Psychology, is one of the world's preeminent experts on the effects of so-called recreational drugs on the human mind and body. Dr. Hart is open about the fact that he uses drugs himself, in a happy balance with the rest of his full and productive life as a colleague, husband, father, and friend. In Drug Use for Grown-Ups, he draws on decades of research and his own personal experience to argue definitively that the criminalization and demonization of drug use--not drugs themselves--have been a tremendous scourge on America, not least in reinforcing this country's enduring structural racism. Dr. Hart did not always have this view. He came of age in one of Miami's most troubled neighborhoods at a time when many ills were being laid at the door of crack cocaine. His initial work as a researcher was aimed at proving that drug use caused bad outcomes. But one problem kept cropping up: the evidence from his research did not support his hypothesis. From inside the massively well-funded research arm of the American war on drugs, he saw how the facts did not support the ideology. The truth was dismissed and distorted in order to keep fear and outrage stoked, the funds rolling in, and Black and brown bodies behind bars. Drug Use for Grown-Ups will be controversial, to be sure: the propaganda war, Dr. Hart argues, has been tremendously effective. Imagine if the only subject of any discussion about driving automobiles was fatal car crashes. Drug Use for Grown-Ups offers a radically different vision: when used responsibly, drugs can enrich and enhance our lives. We have a long way to go, but the vital conversation this book will generate is an extraordinarily important step.

**Marijuana and Medicine**-Institute of Medicine 1999-07-10 The medical use of marijuana is surrounded by a cloud of social, political, and religious controversy, which obscures the facts that should be considered in the debate. This book summarizes what we know about marijuana from evidence-based medicine--the harm it may do and the relief it may bring to patients. The book helps the reader understand not only what science has to say about medical marijuana but also the logic behind the scientific conclusions. Marijuana and Medicine addresses the science base and the therapeutic effects of marijuana use for medical conditions such as glaucoma and multiple sclerosis. It covers marijuana's mechanism of action, acute and chronic effects on health and behavior,

potential adverse effects, efficacy of different delivery systems, analysis of the data about marijuana as a gateway drug, and the prospects for developing cannabinoid drugs. The book evaluates how well marijuana meets accepted standards for medicine and considers the conclusions of other blue-ribbon panels. Full of useful facts, this volume will be important to anyone interested in informed debate about the medical use of marijuana: advocates and opponents as well as policymakers, regulators, and health care providers.

**How Not to Die**-Michael Greger, M.D., FACLM 2015-12-08 From the physician behind the wildly popular NutritionFacts website, How Not to Die reveals the groundbreaking scientific evidence behind the only diet that can prevent and reverse many of the causes of disease-related death. The vast majority of premature deaths can be prevented through simple changes in diet and lifestyle. In How Not to Die, Dr. Michael Greger, the internationally-renowned nutrition expert, physician, and founder of NutritionFacts.org, examines the fifteen top causes of premature death in America--heart disease, various cancers, diabetes, Parkinson's, high blood pressure, and more--and explains how nutritional and lifestyle interventions can sometimes trump prescription pills and other pharmaceutical and surgical approaches, freeing us to live healthier lives. The simple truth is that most doctors are good at treating acute illnesses but bad at preventing chronic disease. The fifteen leading causes of death claim the lives of 1.6 million Americans annually. This doesn't have to be the case. By following Dr. Greger's advice, all of it backed up by strong scientific evidence, you will learn which foods to eat and which lifestyle changes to make to live longer. History of prostate cancer in your family? Put down that glass of milk and add flaxseed to your diet whenever you can. Have high blood pressure? Hibiscus tea can work better than a leading hypertensive drug--and without the side effects. Fighting off liver disease? Drinking coffee can reduce liver inflammation. Battling breast cancer? Consuming soy is associated with prolonged survival. Worried about heart disease (the number 1 killer in the United States)? Switch to a whole-food, plant-based diet, which has been repeatedly shown not just to prevent the disease but often stop it in its tracks. In addition to showing what to eat to help treat the top fifteen causes of death, How Not to Die includes Dr. Greger's Daily Dozen --a checklist of the twelve foods we should consume every day. Full of practical, actionable advice and surprising, cutting edge nutritional science, these doctor's orders are just what we need to live longer, healthier lives.

**Nudge**-Richard H. Thaler 2009 Every day we make decisions: about the things that we buy or the meals we eat; about the investments we make or our children's health and education; even the causes that we champion or the planet itself. Unfortunately, we often choose poorly. We are all susceptible to biases that can lead us to make bad decisions that make us poorer, less healthy and less happy. And, as Thaler and Sunstein show, no choice is ever presented to us in a neutral way. By knowing how people think, we can make it easier for them to choose what is best for them, their families and society. Using dozens of eye-opening examples the authors demonstrate how to nudge us in the right directions, without restricting our freedom of choice. Nudge offers a unique new way of looking at the world for individuals and governments alike. This is one of the most engaging, provocative and important books you will ever read.

**Polymer Reaction Engineering**-Jose Asua 2008-04-15 Polymers are an example of "products-by-process", where the final product properties are mostly determined during manufacture, in the reactor. An understanding of processes occurring in the polymerization reactor is therefore crucial to achieving efficient, consistent, safe and environmentally friendly production of polymeric materials. Polymer Reaction Engineering provides the link between the fundamentals of polymerization kinetics and polymer microstructure achieved in the reactor. Organized according to the type of polymerization, each chapter starts with a description of the main polymers produced by the particular method, their key microstructural features and their applications. Polymerization kinetics and its effect on reactor configuration, mass and energy balances and scale-up are covered in detail. The text is illustrated with examples emphasizing general concepts, principles and methodology. Written as an authoritative guide for chemists and chemical engineers in industry and academe, Polymer Reaction Engineering will also be a key reference source for advanced courses in polymer chemistry and technology.

**Stigma**-Erving Goffman 2009-11-24 From the author of The Presentation of Self in Everyday Life, Stigma analyzes a person's feelings about himself and his relationship to people whom society calls "normal." Stigma is an illuminating excursion into the situation of persons who are unable to conform to standards that society calls normal. Disqualified from full social acceptance, they are stigmatized individuals. Physically deformed people, ex-mental patients, drug addicts, prostitutes, or those ostracized for other reasons must constantly strive to adjust to their precarious social identities. Their image of themselves must daily confront and be affronted by the image which others reflect back to them. Drawing extensively on autobiographies and case studies, sociologist Erving Goffman analyzes the stigmatized person's feelings about himself and his relationship to "normals." He explores the variety of strategies stigmatized individuals employ to deal with the rejection of others, and the complex sorts of information about themselves they project. In Stigma the interplay of alternatives the stigmatized individual must face every day is brilliantly examined by one of America's leading social analysts.

**Hillbilly Elegy**-J. D. Vance 2018-05-01 THE #1 NEW YORK TIMES BESTSELLER IS NOW A MAJOR-MOTION PICTURE DIRECTED BY RON HOWARD AND STARRING AMY ADAMS, GLENN CLOSE, AND GABRIEL BASSO "You will not read a more important book about America this year."—The Economist "A riveting book."—The Wall Street Journal "Essential reading."—David Brooks, New York Times Hillbilly Elegy is a passionate and personal analysis of a culture in crisis—that of white working-class Americans. The disintegration of this group, a process that has been slowly occurring now for more than forty years, has been reported with growing frequency and alarm, but has never before been written about as searingly from the inside. J. D. Vance tells the true story of what a social, regional, and class decline feels like when you were born with it hung around your neck. The Vance family story begins hopefully in postwar America. J. D.'s grandparents were "dirt poor and in love," and moved north from Kentucky's Appalachia region to Ohio in the hopes of escaping the dreadful poverty around them. They raised a middle-class family, and eventually one of their grandchildren would graduate from Yale Law School, a conventional marker of success in achieving generational upward mobility. But as the family saga of Hillbilly Elegy plays out, we learn that J.D.'s grandparents, aunt, uncle, sister, and, most of all, his mother struggled profoundly with the demands of their new middle-class life, never fully escaping the legacy of abuse, alcoholism, poverty, and trauma so characteristic of their part of America. With piercing honesty, Vance shows how he himself still carries around the demons of his chaotic family history. A deeply moving memoir, with its share of humor and vividly colorful figures, Hillbilly Elegy is the story of how upward mobility really feels. And it is an urgent and troubling meditation on the loss of the American dream for a large segment of this country.
