Rebuilding Crime Prevention Through Environmental Design-Rachel Armitage 2019-02-11 Crime Prevention Through Environmental Design (CPTED) is a practice-oriented approach to reduce the risk of offences such as burglary and fear of crime by modifying the built environment. In recent years, this approach has been criticised for duplicating terminology and for failing to integrate successfully with other approaches. Rebuilding Crime Prevention Through Environmental Design explores and extends the common ground between CPTED and situational crime prevention – another traditional approach in the field of crime prevention and security – via the latter’s evolution into the field of crime science. Drawing on international research to develop new interdisciplinary perspectives, this volume explores how situational crime prevention and environmental criminological theories relate to those of Crime Prevention Through Environmental Design and considers how crime science can be reformulated to merge different approaches, or at least articulate them better. Rebuilding Crime Prevention Through Environmental Design will appeal to students, applied academic researchers and practitioners who wish to deepen their understanding and contribute in turn to the ongoing revitalisation of the field.

Crime Prevention Through Environmental Design-Clarence Ray Jeffery 1977-07-01 ‘The book is of value to those involved in the teaching and practive of criminology and to those in the fields of genetics, psychology, learning theory, environmental psychology, and urban design. Using Crime Prevention Through Environmental Design in Problem-Solving-Diane Zahn 2011-01 This is a print on demand edition of a hard to find publication. Crime prevention through environmental design (CPTED) is anapproach to problem-solving that asks, what is it about this location that places people at risk, or that results in opportunities for crime? Solving a problem thus requires a detailed understanding of both crime and place, and the response should consider one of the three objectives of crime prevention through environmental design: control access, provide opportunities to see and be seen, or define ownership and encourage the maintenance of territory. This guidebook explains the basic principles of CPTED and outlines a process for identifying problems, evaluating the physical environment, and identifying strategies that will remove or reduce opportunities for crime. The Death and Life of Great American Cities-Jane Jacobs 2016-07-20 Thirty years after its publication, The Death and Life of Great American Cities was described by The New York Times as "perhaps the most influential single work in the history of town planning....[It] can also be seen in a much larger context. It is first of all a work of literature; the descriptions of street life as a kind of ballet and the bitingly satiric account of traditional planning theory can still be read for pleasure even by those who long ago absorbed and appropriated the book’s arguments." Jane Jacobs, an editor and writer on architecture in New York City in the early sixties, argued that urban diversity and vitality were being destroyed by powerful architects and city planners. Rigorous, sane, and delightfully epigrammatic, Jacobs’s small masterpiece is a blueprint for the humanistic management of cities. It is sensible, knowledgeable, readable, indispensable. The author has written a new foreword for this Modern Library edition.

Cyber Weaponry-Henry Prunckun 2018-04-04 There is little doubt that cyber-space has become the battle space for confrontations. However, to conduct cyber operations, a new armory of weapons needs to be employed. No matter how many, or how sophisticated an aggressor’s kinetic weapons are, they are useless in cyber-space. This book looks at the milieu of the cyber weapons industry, as well as the belligerents who use cyber weapons. It discusses what distinguishes these hardware devices and software programs from computer science in general. It does this by focusing on specific aspects of the topic—contextual issues of why cyber-space is the new battleground, defensive cyber weapons, offensive cyber weapons, dual-use weapons, and the implications these weapons systems have for practice. Contrary to popular opinion, the use of cyber weapons is not limited to nation states; though this is where the bulk of news reporting focuses. The reality is that there isn’t a sector of the political-economy that is immune to cyber skirmishes. So, this book looks at cyber weapons not only by national security agencies and the military, but also by law enforcement, and the business sector—the latter includes administrations termed non-government organisations (NGOs). This book offers study material suitable for a wide-ranging audience—students, professionals, researchers, policy officers, and ICT specialists.

Crime Prevention Through Environmental Design in Parking Facilities-Mary S. Smith 1996

The Criminology of Criminal Law-William Laufer 2017-07-05 The Criminology of Criminal Law considers the relation between criminal law and theories of crime, criminality and justice. This book discusses a wide range of topics, including: the way in which white-collar crime is defined; new perspectives on stranger violence; the reasons why criminologists have neglected the study of genocide; the idea of boundary crossing in the control of deviance; the relation between punishment and social solidarity; the connection between the notion of justice and modern sentencing theory; the social reaction to treason; and the association between politics and punitiveness. Contributors include Bonnie Berry, Don Gottfredson, David F. Greenberg, Marc Riedel, Jason Rourke, Kip Schlegel, Vered Vinitzky-Seroussi, Leslie T. Wilkins, Marvin E. Wolfgang, and Richard A. Wright. The Criminology of Criminal Law concludes with an analysis of the results of a study on the most cited scholars in the Advances in Criminological Theory series. This work will be beneficial to criminologists, sociologists, and scholars of legal studies. Advances in Criminological Theory is the first series exclusively dedicated to the dissemination of original work on criminological theory. It was created to overcome the neglect of theory construction and validation in existing criminological publications.

Designing Out Crime-Great Britain. Home Office. Research Unit 1980

CPTED 101: Crime Prevention Through Environmental Design-Tod Schneider 2010 Crime Prevention through Environmental Design (CPTED) 101 applies to both new and existing schools and is built on three simple concepts: natural surveillance, natural access control, and territoriality. If a school’s layout seems unsafe, adopting a few CPTED fundamentals may help make it significantly safer. This paper offers some tips for making schools safe using the CPTED concepts. (Contains 1 footnote.).

Handbook of Research on School Violence in American K-12 Education-Gordon A. Crews 2018-07-09 "This book examines the most frightening and challenging form of juvenile violence, the K-12 school violence perpetrator, as separate from all other forms of school and public offenders. It separates school violence perpetrators into a more concise types such as: traditional school violence perpetrators, gang-related school violence perpetrators, and non-school associated mentally ill school violence perpetrators"--

Design Out Crime-Ian Colquhoun 2007-03-14 Here is a book about the practical design of communities and housing in which people can enjoy a good quality of life, free from crime and fear of crime. Recognising that crime, vandalism and anti-social behaviour are issues of high public concern, and that the driving forces behind crime are numerous, this book argues that good design can help tackle many of these issues. It shows how, through integrating simple crime prevention principles in the design process, it is possible, almost without notice, to make residential environments much safer. Written from the perspective of an architect and town planner, this book offers practical design guidelines through a set of accessible case studies drawn from the UK, USA, The Netherlands and Scandinavia. Each example illustrates how success comes when design solutions reflect local characteristics and where communities are truly sustainable; where residents feel they belong, and where crime is dealt with as part of the bigger picture of urban design.

Environmental Criminology-Martin A. Andresen 2014-03-14 The field of environmental criminology is a staple theoretical framework in contemporary criminological theory. With this book, Martin Andresen presents the first comprehensive and sole-authored textbook on this influential and compelling school of criminological thought. He covers a wide range of topics, including: the origins of environmental criminology; the primary theoretical frameworks, such as routine activity theory, geometric theory of crime, rational choice theory, and the pattern theory of crime; the practical application of environmental criminology; an examination of how theories are operationalized and tested; policy implications for the practice of crime prevention. As well as these "popular topics", Andresen also discusses also a number of topics that are at the leading edge of research within environmental criminology. This text will be ideal for courses on crime prevention, where students are often encouraged to consider policy problems and apply theory to practice. This book offers up environmental criminology as a theoretical framework for making sense of complex neighbourhood problems, meaning that it will be perfect for modules on geography of crime, crime analysis and indeed, environmental criminology. It would also be a good supplement for courses on criminological theory.
