Transfusion Medicine and Hemostasis—Christopher D. Hillyer 2009 "As the title indicates, [the editors] view, and have done so for some time, that both transfusion medicine and hemostasis, particularly laboratory methods and diagnostic tests employed in routine and specialized coagulation laboratories, are linked. More specifically coagulation tests, and indeed other laboratory tests and results, are often used to guide and monitor transfusion, blood component and coagulation factor therapy."—P. xxi.

Transfusion Medicine, Apheresis, and Hemostasis—Huy P. Pham 2017-09-15 Transfusion Medicine, Apheresis, and Hemostasis: Review Questions and Case Studies is the collaborative effort that spanned a time period of 2 years and included 50 experts, many whom are national leaders in their respected fields. It also represents the passion and privilege we feel to teach the next generation of physicians in Transfusion Medicine and Apheresis. The main goal for this book is to help the readers build a solid foundation of both basic and advanced conceptual knowledge to prepare for the American Board of Pathology (ABP) certification exam in Transfusion Medicine. This book is not intended to be a substitute for textbooks, original research or review articles, and/or clinical training. Further, since the field of medicine, both from a scientific and regulatory perspective, rapidly changes, the readers are advised to continuously update their knowledge by attending national meetings and reading clinical journals. To equip the readers with the basic knowledge in critical reading and data analysis, which is an essential skill in daily medical practice, a novel chapter titled "Data Interpretation in Laboratory Medicine was included in this book. In this chapter, the readers are asked to make logical conclusions based on the given data and/or statistical results. Moreover, there is also a chapter on "Practical Calculations in Transfusion Medicine, Apheresis, and Hemostasis to help consolidate all the necessary formulas commonly used in daily practice for easy reference. These chapters are unique to our book and will not be found in any other currently on the market. All of the questions in this book were originally created by the authors of each chapter. Each question can either be standalone or part of a case scenario representing challenge cases in Transfusion Medicine, Apheresis, and Hemostasis. These questions often represent both rare and common clinical scenarios that the authors have seen during their clinical practice. Each question is then followed by 5 possible answers, with only one being correct (or the best answer). After the question, there is a conceptual explanation followed by a more factual explanation of the right and wrong answers. We gave the individual authors the freedom to choose how they explained the wrong answer choices. Some authors chose to be more direct (e.g. Answer A is incorrect because...), while other authors chose a more conversational style (e.g. Human resources (answer A) includes staffing, selection, orientation, training, and competency assessment of employees). This format is designed to help the student linking the conceptual and factual knowledge together to form a solid foundation for use in clinical practice. At the end of each chapter, there is a list of articles and textbooks that will prove useful to the motivated student who wishes to become an expert in the field. Another special feature to our textbook is the presence of a pre-test and post-test, which are provided to help the readers with self-assessment. As stated above, the main focus of this book is to help the readers preparing for the ABP certification exam in Transfusion Medicine. However, due to the interdisciplinary nature of the field of Transfusion Medicine, Apheresis, and Hemostasis, we believe that this book is also beneficial to and can be used by all clinicians involved in the management of complex transfusion, apheresis, and hemostasis issues, such as hematologists, anesthesiologists, surgeons, and critical care physicians. We further believe that it is a helpful guide for these specialists to prepare for their own specialty certification exam, when the topics are related to Transfusion Medicine, Apheresis, and Hemostasis.

Coagulation and Blood Transfusion—C.Th. Smit Sibinga 2012-12-06 With great pleasure I welcome you to the City of Groningen. In more than one way there is cause for celebration. Today marks the third lustrum of the annual international sympo sium on blood transfusion, organized by the Rode Kruis Bloedbank Groningen-Drenthe. In my opinion it has been a remarkable initiative of the Bloedbank, to start organizing a scientific conference, as it did, in 1976. It meant, among others, that in case of success the initiative would grow to be an annual item on the international congress calen der. It also meant that a possible third lustrum would coincide with the celebration of the 950th anniversary of the City of Groningen. I am happy to note that the initiative has been successful: over the past fourteen years the Rode Kruis Bloedbank Groningen-Drenthe has succeeded in organizing an annual symposium on blood transfusion, with a different theme each year, and with an average attendance of 250 participants from some 26 countries world-wide. The platform created with the special formula of the symposium, for science and industry, has been well balanced and beneficial to both. Mr. Chairman, ladies and gentlemen, I like to compliment the organizers with the success that they have attained. Allow me to men tion the name of just one person, in whom I like to thank everyone who has been involved in creating the annual

Management of Hemostasis and Coagulopathies for Surgical and Critically Ill Patients—Andy D. Nguyen 2016-04-18 Management of Hemostasis and Coagulopathies for Surgical and Critically Ill Patients: An Evidence-Based Approach offers a concise guide to a sub-specialty of transfusion medicine from the clinical laboratory perspective. It focuses on the clinical tests that may be done during preoperative assessment, intraoperative, and postoperative assessment and management of surgical or critically ill patients. Management of hemostasis and coagulopathies is approached from an evidence-based perspective—the coagulation status of a patient according to the laboratory test results. Algorithms and decision-support software, designed by the authors, guide clinicians with an additional tool to base transfusion dosage on specific laboratory results, including the use of an artificial neural network for predicting more accurate blood use. Chapters reflect the experience of all three authors who have successfully applied the algorithm for better patient management as well as decreased wastage of expensive blood products, from both the clinical laboratory/pathology and clinical medicine perspective. This book will appeal to a broad section of clinical laboratory and medical practitioners from hematopathology, to internal medicine, surgery, and anesthesiology. This book draws all this information into a single, comprehensive and authoritative resource. · First edition won Best Book in Medical Science Award from the Association of American Publishers · Contains fourteen new chapters on topics such as platelet genomics and proteomics, inhibition of platelet function by the endothelium, clinical tests of platelet function, real time in vivo imaging of platelets, and inherited thrombocytopenias · A comprehensive full color reference comprising over 70 chapters, 1400 pages, and 16,000 references

Hemostasis and Thrombosis-Hussain I. Saba 2014-02-03 Thrombotic and bleeding disorders affect at least 10 million people in the US alone. As a result there has been much more interest and research into this field. The field of haematology is undergoing major advances in thrombosis research, including significant additions to recommended treatment protocols and guidelines. This new handbook will cover all aspects of the practical mangement of commonly encountered thrombotic and bleeding disorders, with emphasis on clinical diagnosis, treatment and day-to-day management. It will distil the most clinically relevant material from the literature for all those working in the field of haemostasis and thrombosis.

Patient Blood Management-Hans Gombotz 2015-12-16 Patient Blood Management (PBM) is an innovative clinical concept that aims to reduce the need for allogenic blood transfusions, cut health-care costs, and avert or correct the risk factors related to blood transfusion, thus minimizing the rate of side effects and complications. This comprehensive hands-on volume offers a three-point approach for the implementation of PBM to improve patient outcome, focusing on how to prevent or treat anemia, reduce blood loss, and increase anemia tolerance. The book also goes beyond preoperative PBM, with detailed accounts of coagulation disorder management and the administration of coagulation products and platelet concentrates. Special Features: Presents a clear three-pillar strategy for the application of PBM: diagnosis and treatment of anemia, reduction of peri-interventional blood loss, and optimization of the tolerance to anemia in the everyday clinical setting Covers issues such as PBM during surgery, requirements for modern transfusion medicine, ordering blood products, the role of pre-anesthesia clinics, benchmarking processes, and potential implications of PBM in the public health sector Overview of research in PBM including landmark studies and current clinical trials Boxes in each chapter highlighting key information, core statements, and summaries A multidisciplinary and international team of contributors experienced in PBM Patient Blood Management is a guide for clinicians and residents whose patients are at risk for anemia, coagulation disorders, or severe blood loss. Anesthesiologists, surgeons, and specialists involved in the use of blood and blood products can use the book for quick reference or to learn more about a leading-edge concept for optimizing patient safety and improving outcome.
