How to Become a Certified Nursing

Assistant-Vivian Cheng 2015-11-17 Nurse Assistants play a vital role in our healthcare facilities. They provide patients with assistance in regard to their basic needs including bathing, feeding, and dressing them. The level of assistance depends on the individual needs of each patient. They also are an invaluable resource for the Nursing staff. Becoming a Nurse Assistant requires completion of a certificate program. Such programs are available at several medical facilities and college campuses. The programs can be completed in as little as four weeks. Others run as long as twelve weeks. It depends on the curriculum, the requirements of the state the program is taking place in, and how many hours per day the course is conducted. Grab a copy of this ebook today

Who Will Care For Us?-Paul Osterman

2017-09-06 The number of elderly and disabled adults who require assistance with day-to-day activities is expected to double over the next twenty-five years. As a result, direct care workers such as home care aides and certified nursing assistants (CNAs) will become essential to many more families. Yet these workers tend to be low-paid, poorly trained, and receive little respect. Is such a workforce capable of addressing the needs of our aging population? In *Who Will Care for Us?* economist Paul Osterman assesses the challenges facing the long-term care industry. He presents an innovative policy agenda that reconceives direct care workers' work roles and would improve both the quality of their jobs and the quality of elder care. Using national surveys, administrative data, and nearly 120 original interviews with workers, employers, advocates, and policymakers, Osterman finds that direct care workers are marginalized and

often invisible in the health care system. While doctors and families alike agree that good home care aides and CNAs are crucial to the well-being of their patients, the workers report poverty-level wages, erratic schedules, exclusion from care teams, and frequent incidences of physical injury on the job. Direct care workers are also highly constrained by policies that specify what they are allowed to do on the job, and in some states are even prevented from simple tasks such as administering eye drops. Osterman concludes that broadening the scope of care workers' duties will simultaneously boost the quality of care for patients and lead to better jobs and higher wages. He proposes integrating home care aides and CNAs into larger medical teams and training them as "health coaches" who educate patients on concerns such as managing chronic conditions and transitioning out of hospitals. Osterman shows that restructuring direct care workers' jobs, and providing the appropriate training, could lower health spending in the long term by reducing unnecessary emergency room and hospital visits, limiting the use of nursing homes, and lowering the rate of turnover among care workers. As the Baby Boom generation ages, *Who Will Care for Us?* demonstrates the importance of restructuring the long-term care industry and establishing a new relationship between direct care workers, patients, and the medical system.

Unequal Time-Dan Clawson 2014-07-10 Life is unpredictable. Control over one's time is a crucial resource for managing that unpredictability, keeping a job, and raising a family. But the ability to control one's time, much like one's income, is determined to a significant degree by both gender and class. In *Unequal Time*, sociologists Dan Clawson and Naomi Gerstel explore the ways in which social inequalities permeate the workplace, shaping employees' capacities to determine both their work schedules and home lives, and exacerbating differences between men and women, and the economically privileged and disadvantaged. *Unequal Time* investigates the interconnected schedules of four occupations in the health sector—professional-class doctors and nurses, and working-class EMTs and nursing assistants. While doctors and EMTs are predominantly men, nurses and nursing assistants are overwhelmingly women. In all four occupations, workers routinely confront schedule uncertainty, or unexpected events that interrupt, reduce, or extend work hours. Yet, Clawson and Gerstel show that members of these four occupations experience the effects of schedule uncertainty in very distinct ways, depending on both gender and class. But doctors, who are professional-class and largely male, have significant control over

their schedules and tend to work long hours because they earn respect from their peers for doing so. By contrast, nursing assistants, who are primarily female and working-class, work demanding hours because they are most likely to be penalized for taking time off, no matter how valid the reasons. *Unequal Time* also shows that the degree of control that workers hold over their schedules can either reinforce or challenge conventional gender roles. Male doctors frequently work overtime and rely heavily on their wives and domestic workers to care for their families. Female nurses are more likely to handle the bulk of their family responsibilities, and use the control they have over their work schedules in order to dedicate more time to home life. Surprisingly, Clawson and Gerstel find that in the working class occupations, workers frequently undermine traditional gender roles, with male EMTs taking significant time from work for child care and women nursing assistants working extra hours to financially support their children and other relatives. Employers often underscore these disparities by allowing their upper-tier workers (doctors and nurses) the flexibility that enables their gender roles at home, including, for example, reshaping their workplaces in order to accommodate female nurses' family obligations. Low-wage workers, on the other hand, are pressured to put their jobs before the unpredictable events they might face outside of work. Though we tend to consider personal and work scheduling an individual affair, Clawson and Gerstel present a provocative new case that time in the workplace also collective. A valuable resource for workers' advocates and policymakers alike, *Unequal Time* exposes how social inequalities reverberate through a web of interconnected professional relationships and schedules, significantly shaping the lives of workers and their families.

Reasons Why You Need This CNA Study Guide
Getting prepared for the CNA exam is no easy task. According to a result poll, over 27% of those that take the test, fail! That means those students wasted their money and their time. This can be absolutely frustrating and cause many problems in the future. Another reason having a CNA Study Guide on hand is super important is that once you become a certified nursing assistant, you will only have certification for that particular state. So, if you move to another state at some point in your life, you will have to re-certify in that state. That may

sound easy, considering you might have done it for years before moving...however, imagine taking the drivers test again after all those years of learning how to really drive a car. You probably don't follow all of the rules, right? Well the same can happen to a CNA. They can develop the "get it done the right way" type attitude which won't test well on the certification exam. 10 out of 10 must have for all CNA's~CNA Exam Cram

The Future of Nursing-Institute of Medicine
2011-02-08 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
