Options, Futures and Exotic Derivatives-Eric Briys 1998-05-08 "Over the past two decades, the mathematically complex models of finance theory have had a direct and wide-ranging influence on finance practice. Nowhere is this conjoining of intrinsic intellectual interest with extrinsic application better exemplified than in derivative-security pricing. The backgrounds of the authors of Options, Futures and Exotic Derivatives fit perfectly this pattern of combining theory and practice and so does their book. The range and depth of subject matter show excellent taste for what is essential to know the field and what is relevant and important to its application in the financial world. In addition to its fine subject-defining, the book delivers on subject-content, with rigorous derivations presented in a clear, direct voice for the serious student, whether academic or practitioner. To the reader: Bon Appetit!" Robert C. Merton, Harvard Business School Long-Term Capital Management, L.P. "One of the merits of this book is that it is self-contained. It is both a textbook and a reference book. It covers the basics of the theory, as well as

the techniques for valuation of many of the more exotic derivatives. It contains a detailed knowledge of the field. What is more, however, it is written with a deep understanding of the economics of finance." From the Foreword by Oldrich Alfons Vasicek "The authors have done an admirable job at distilling what is relevant in option research in one single volume. I wish I'd had the chance to read it before writing my own book." Nassim Taleb, veteran option arbitrageur and bestselling author of *Dynamic Hedging: Managing Vanilla and Exotic Options* "This is a delightful promenade in derivatives land. The book is encyclopaedic yet crisp and inspired. It is the story - told in equations - of the charms and spells of options and their underlying mathematics." Jamil Baz, Head of Financial Strategies, Lehman Brothers Europe Building steadily from the basic mathematical tools to the very latest techniques in exotic options, *Options, Futures and Exotic Derivatives* covers all aspects of the most innovative and rapidly developing area of international financial markets - the world of over-the-counter and tailor-made

Financial Calculus-Martin Baxter 1996-09-19

The rewards and dangers of speculating in the modern financial markets have come to the fore in recent times with the collapse of banks and bankruptcies of public corporations as a direct

result of ill-judged investment. At the same time, individuals are paid huge sums to use their mathematical skills to make well-judged investment decisions. Here now is the first rigorous and accessible account of the mathematics behind the pricing, construction and hedging of derivative securities. Key concepts such as martingales, change of measure, and the Heath-Jarrow-Morton model are described with mathematical precision in a style tailored for market practitioners. Starting from discrete-time hedging on binary trees, continuous-time stock models (including Black-Scholes) are developed. Practicalities are stressed, including examples from stock, currency and interest rate markets, all accompanied by graphical illustrations with realistic data. A full glossary of probabilistic and financial terms is provided. This unique book will be an essential purchase for market practitioners, quantitative analysts, and derivatives traders.

PowerPoint slides that can be used by instructors is also on the website. The opening chapter reviews different types of machine learning models. It explains the role of the training data set, the validation data set, and the test data set. It also explains the issues involved in cleaning data and reviews Bayes' theorem. Chapter 2 is devoted to unsupervised learning. It explains the k-means algorithm and alternative approaches to clustering. It also covers principal components analysis. Chapter 3 explains linear and logistic regression. It covers regularization using Ridge, Lasso, and Elastic Net. Chapter 4 covers decision trees. It includes a discussion of the naive Bayes classifier, random forests, and other ensemble methods. Chapter 5, explains how the SVM approach can be used for both linear and non-linear classification as well as for the prediction of a continuous variable. Chapter 6 is devoted to neural networks. Global Norms and Local Action-Peace A. Medie 2020-03-06 Violence against women has been a focus of transnational advocacy networks

since the early 1980s, and the United Nations has, in intervening years, passed a series of resolutions to condemn, prevent, investigate, and punish this violence. Member states have committed to implementing this agenda. Yet, despite this buy-in at the global level, implementation at the domestic level remains uneven. Scholars have found that states are more likely to translate global standards into national laws when pressured by women's movements and international organizations. However, a dearth of research on the implementation at the national and street-levels of these international women's rights norms hampers an understanding of what happens after states pass laws. In Africa, where most states have not prioritized the prevention of violence against women, and the majority of perpetrators act with impunity, there is a major implementation gap. This gap is acute in some post-conflict countries on the continent. Thus, despite the presence of laws on various forms of violence against women in most African countries, justice remains inaccessible to most victims. In *Global Norms and Local Action*, Peace

A. Medie studies the domestic implementation of international norms by examining how and why two post-conflict states in Africa, Liberia and Côte d'Ivoire, have differed in their responses to rape and domestic violence. Specifically, she looks at the roles of the United Nations and women's movements in the establishment of specialized criminal justice sector agencies, and the referral of cases for prosecution. She argues that variation in implementation in Liberia and Côte d'Ivoire can be explained by the levels of international and domestic pressures that states face and by the favorability of domestic political and institutional conditions. Medie's study is based on interviews with over 300 policymakers, bureaucrats, staff at the UN and NGOs, police officers, and survivors of domestic violence and rape an unprecedented depth of research into women's rights and gender violence norm implementation in post-conflict countries. Furthermore, through her interviews with survivors of violence, Medie explains not only how states implement anti-rape and anti-domestic violence norms, but also how women

experience and are affected by these norms. She draws on this research to recommend that states adopt a holistic approach to addressing violence against women.
