Writing(s) at the Crossroads-Georgeta Cislaru 2015-08-05 This volume aims at contributing to an interpretive approach to writing and its dynamics. It offers a general scope on the process-product interface by multiplying the points of view on both the process and the product and their links. The book presents new findings and perspectives in the study of language and writing, both theoretical and methodological (e.g. dual process models of writing, pragmatics of writing, linguistic analysis of psycholinguistic units such as bursts of production). It also presents new tools for a

longitudinal approach to the writing steps, key-stroke logging with integrated linguistic modules, and textometric analysis of written texts. The volume is composed of five sections that highlight different approaches to writing from the viewpoint of multiple disciplines: Anthropology, Cognitive Psycholinguistics, Communication Studies, Didactics (Applied Linguistics), Discourse Analysis, Literacy, Sociolinguistics and Text Genetics. This book will be relevant for scholars and students interested in writing, text analysis, literacy, learning and teaching. As of January 2019, this e-book is freely available, thanks to the support of libraries working with Knowledge Unlatched.

Landmark Essays on Writing Process-Sondra Perl 1994 As the field of composition studies became more sophisticated in its understanding of research, the designs and assumptions underlying the early work were called into question. Researchers were challenged to design studies that were sensitive to the varying contexts in which writers write and to the ways their own roles shaped their investigations. The more comprehensive studies called for by these critiques are only now beginning to appear. This volume presents some articles in which writers and what they do are at the center of inquiry. The focus is on what actually occurs as people write and how they make sense of what they are doing. Choosing such a focus grants human action central importance and enacts the belief that looking closely at individuals can be a primary starting point for understanding them and their worlds. Other papers take the researcher's shaping role into account. The integrity of such work rests not so much on a lifeless detachment from the phenomena being studied as on the author's vital engagement, and on a faithful rendering of what has been observed. This includes the author revealing his or her own impact of what has been seen and said. In the broadest sense, composing is something we all do: the

students and parents and writers and teachers who serve as subjects of research and those who write the research itself. It is what each of us is engaged in when we shape our understanding of life through the writing we do. And it is what can continue to light the way in composition studies for it illuminates what still makes this inquiry so intriguing and so rich -- that only human beings have this capacity to look and see more, to create new texts and new work, and in the creating compose their way to new understandings and new selves.

Solving Problems in Technical Communication-Johndan Johnson-Eilola 2012-12-26 The field of technical communication is rapidly expanding in both the academic world and the private sector, yet a problematic divide remains between theory and practice. Here Stuart A. Selber and Johndan Johnson-Eilola, both respected scholars and teachers of technical communication, effectively bridge that gap. Solving Problems in Technical Communication collects the latest research and theory in the field and applies it to real-world problems faced by practitioners—problems involving ethics, intercultural communication, new media, and other areas that determine the boundaries of the discipline. The book is structured in four parts, offering an overview of the field, situating it historically and culturally, reviewing various theoretical approaches to technical communication, and examining how the field can be advanced by drawing on diverse perspectives. Timely, informed, and practical, Solving Problems in Technical Communication will be an essential tool for undergraduates and graduate students as they begin the

transition from classroom to career.

Product Experience-Hendrik N. J. Schifferstein 2011-04-28 Product Experience brings together research that investigates how people experience products: durable, non-durable, or virtual. In contrast to other books, the present book takes a very broad, possibly all-inclusive perspective, on how people experience products. It thereby bridges gaps between several areas within psychology (e.g. perception, cognition, emotion) and links these areas to more applied areas of science, such as product design, human-computer interaction and marketing. The field of product experience research will include some of the research from four areas: Arts, Ergonomics, Technology, and Marketing. Traditionally, each of these four fields seems to have a natural emphasis on the human (ergonomics and marketing), the product (technology) or the experience (arts). However, to fully understand human product experience, we need to use different approaches and we need to build bridges between these various fields of expertise. Most comprehensive collection of psychological research behind product design and usability Consistenly addresses the 3 components of human-product experience: the human, the product, and the experience International contributions from experts in the field

Innovative Approaches to Teaching Technical

Communication-Tracy Bridgeford 2004 Programs in technical writing, technical communication, and/or professional communication have recently grown in enrollment as the demand among employers for formally prepared technical writers and editors has grown. In response, scholarly treatments of the subject and the teaching of technical writing are also burgeoning, and the body of research and theory being published in this field is many times larger and more accessible than it was even a decade ago. Although many theoretical and disciplinary perspectives can potentially inform technical communication teaching, administration, and curriculum development, the actual influences on the field's canonical texts have traditionally come from a rather limited range of disciplines. Innovative Approaches to Teaching Technical Communication brings together a wide range of scholars/teachers to expand the existing canon.

#MakeoverMonday-Andy Kriebel 2018-10-02 Explore different perspectives and approaches to create more effective visualizations #MakeoverMonday offers inspiration and a giant dose of perspective for those who communicate data. Originally a small project in the data visualization community, #MakeoverMonday features a weekly chart or graph and a dataset that community members reimagine in order to make it more effective. The results have been astounding; hundreds of people have contributed thousands of makeovers, perfectly illustrating the highly variable nature of data visualization. Different takes on the same data showed a wide variation of theme, focus, content, and design, with side-by-side comparisons throwing more- and less-effective techniques into sharp relief. This book is an extension of that project, featuring a variety of makeovers that showcase various approaches to data communication and a focus on the analytical, design and storytelling skills that have been developed through #MakeoverMonday. Paging through the makeovers ignites immediate inspiration for your own work, provides insight into different perspectives, and highlights the techniques that truly make an impact. Explore the many approaches to visual data communication Think beyond the data and

consider audience, stakeholders, and message Design your graphs to be intuitive and more communicative Assess the impact of layout, color, font, chart type, and other design choices Creating visual representation of complex datasets is tricky. There's the mandate to include all relevant data in a clean, readable format that best illustrates what the data is saying—but there is also the designer's impetus to showcase a command of the complexity and create multidimensional visualizations that "look cool." #MakeoverMonday shows you the many ways to walk the line between simple reporting and design artistry to create exactly the visualization the situation requires.
