By its very nature, pharmacology is a challenging interdisciplinary subject that requires understanding concepts from a wide variety of the natural and applied sciences to predict drug action. For this reason, authors Holland, Adams, and Brice have organized Core Concepts in Pharmacology according to body systems and diseases, placing drugs in the context of their therapeutic use. This gives students easier access to the prerequisite anatomy, physiology, pathophysiology, and pharmacology organized in the same chapter where the drugs are discussed. The Fifth Edition continues its prototype approach of introducing, in detail, the one or two most representative drugs in each class. It also maintains a strong emphasis on safe, effective nursing care with a new chapter on preventing medication errors, features new Drug Focus boxes to cover emerging drugs, and includes many more new and updated features.

Contemporary Leadership Challenges-Aida Alvinus 2017-02-01 Social and behavioral science has for decades studied and recognized leadership as a social exchange between leaders and followers. But leadership is rather complex, and as such, it tends to lead to an increased interest within and across different disciplines. This book is an attempt to provide theoretical and empirical framework to better understand leadership challenges in various contexts. The authors cover an array of themes that span from an individual level to an organizational and societal level. In this volume, two sections are presented. The first section based on individual level focuses on different leadership styles and abilities, and the other section provides theories to understand leadership in public administration, in industrial settings and in nonprofit organizations.

The Future of Nursing-Institute of Medicine 2011-02-08 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
