Trauma Surgery-Ozgun Karcioglu 2018-09-19

Although trauma victims constitute around one-tenth to one-eighth of the total patient volume in hospital emergency departments, the burden of trauma on humankind is beyond these statistics. The twenty-first century is witnessing a growing threat on human beings imposed by many sources, namely natural disasters, terrorism and other conflicts, warfare, and transportation accidents; all of which ignite the rise of major trauma incidents worldwide. Physicians, therefore, get involved in trauma management more and more frequently in time. They need to

evaluate, diagnose, treat, and stabilize victims and help them take part in active and productive life as soon as possible. Technological advances have provided many techniques to augment trauma care and resuscitation, fracture healing, wound care, casts and splints, sutures, and transfusions. However, the successful management of trauma warrants a collaboration of emergency medicine, surgical disciplines, intensive care medicine, and almost all the resources of a hospital. This work is an example of a multidisciplinary approach that is a must to maximize synergistic efforts to deliver contemporary care for trauma victims of all ages throughout the world.

Emergency Pathophysiology-Samuel M. Galvagno 2013-05-15 This core textbook defines the pathophysiologic mechanisms underlying the disease states commonly encountered by pre-hospital care providers. The chapters are short, clinically focused and specific to the diseases, disorders, and traumatic conditions of critical

interest to the EMT and pre-hospital environment. Each chapter identifies the appropriate drugs and management guidelines to be used. Designed to bridge the gap between EMT and the Physician in all emergent or acute conditions, the book includes management cautions and tips are highlighted throughout the presentation. The book is tailored specifically to the curriculum for EMT training.

Pre-hospital Obstetric Emergency Training- Advanced Life Support Group (ALSG) 2009-10-30
The Pre-hospital Obstetric Emergency Training (POET) programme provides an introduction to the obstetric patient and the anatomical and physiological changes that occur during pregnancy (including interpretation of patient-held records and rapid assessment of the obstetric patient). It includes clear definitions and describes risk factors, diagnosis and pre-hospital management of significant problems that occur in both early and late pregnancy and the immediate postnatal period. These are all situations that the

pre-hospital practitioner may attend. This text and the accompanying integrated on-line and 'hands on' course will help practitioners identify and manage a range of time-critical obstetric emergencies specifically in the pre-hospital setting, and provides a structured examination and assessment technique as an aid to determining what treatments should be provided before transport, as well as when and how urgently transport should be initiated. POET is of relevance to paramedics, ambulance staff, doctors, and nurses working in the emergency pre-hospital setting and to midwives facilitating home births. It will also be of considerable value to medical and nursing practitioners working in Emergency Departments and unscheduled care settings where immediate access to skilled obstetric assistance is not available.

The Paramedic Updated Edition-David Page 2011-10-27 Ever since the first EMT book was written, there have been two philosophies chosen by the authors for the reader: One type is to provide for the minimal required information and to meet only the minimum standards required by the profession. At the other end of the spectrum is the philosophy that is written to be all-inclusive. This will give the student reader (and ultimately patient care provider) the strongest knowledge possible. If you or your family were to become sick or injured in the middle of the night, in the blowing snow or in the cold rain, do you want the EMT taking care of you to be the very best they possibly could be or simply one who has taken the course to “get by”? This book is not a “get by” book. This book is not written by “get by” authors. This book is not edited by “get by” editors. Just open this book and look at the four editors—four better people in the United States to write such a book could not have been chosen. Norman E. McSwain, Jr., MD, FACS, NREMT-P Professor of Surgery Tulane University The Paramedic Website

Essentials of A&P for Emergency Care-Bruce J. Colbert 2010-10-20

Evolution of Pre-Hospital Emergency Care-

John S. Geddes 2017-09 This volume covers the early development of mobile coronary care within the context of major societal and scientific changes, leading to pre-hospital emergency intensive care, cardiopulmonary resuscitation (CPR) and defibrillation. The success of the Belfast Cardiac Ambulance stimulated the development of broader pre-hospital emergency services and the concomitant growth of related expertise and paramedical personnel. This book celebrates the origins and early development of out-of-hospital resuscitative care. There is much to celebrate: Resuscitation, particularly from ventricular fibrillation, is commonplace. The science of resuscitation is well defined. Effective training programmes for basic and advanced skills are in place. Public training in CPR and use of automated external defibrillators (AEDs) are widespread.
