Judy Mielke 2010-07-05 For gardeners who want to conserve water, the color, fragrance, shade, and lush vegetation of a traditional garden may seem like a mirage in the desert. But such gardens can flourish when native plants grow in

them. In this book, Judy Mielke, an expert on Southwestern gardening, offers the most comprehensive guide available to landscaping with native plants. Writing simply enough for beginning gardeners, while also providing ample information for landscape professionals, she presents over three hundred trees, shrubs, vines, grasses, groundcovers, wildflowers, cacti, and other native plants suited to arid landscapes. The

heart of the book lies in the complete descriptions and beautiful color photographs of plants native to the Mojave, Sonoran, and Chihuahuan desert regions of the southwestern United States and northern Mexico. Mielke characterizes each plant and gives detailed information on its natural habitat, its water, soil, light, temperature, and pruning requirements, and its possible uses in landscape design. In addition, Mielke includes informative discussions of desert ecology, growing instructions for native plants and wildflowers, and "how-to" ideas for revegetation of disturbed desert areas using native plants. She concludes the book with an extensive list of plants by type, including those that have specific features such as shade or fragrance. She also supplies a list of public gardens that showcase native plants.

**Wake Up, Woods**-Michael A. Homoya 2019-10  
Early in the year, our North American forests come to life as native wildflowers start to push up through patches of snow. With longer days and sunlight streaming down through bare branches of towering trees, life on the forest floor awakens from its winter sleep. Plants such as green dragon, squirrel corn, and bloodroot interact with their pollinators and seed dispersers and rush to create new life before the trees above leaf out and block the sun's rays.

Wake Up, Woods showcases the splendor of our warming forests and offers clues to nature's annual springtime floral show as we walk in our parks and wilderness areas, or even in shade gardens around our homes. Readers of Wake Up, Woods will see that Gillian Harris, Michael Homoya and Shane Gibson, through illustrations and text, present a captivating look into our forests' biodiversity, showing how species depend on plants for food and help assure plant reproduction. This book celebrates some of nature's most fascinating moments that happen in forests where we live and play.
