Gardening with Native Plants in the Upper Midwest-Judy Nauseef 2016-04-15 Want to have a garden that is both beautiful and biodiverse, satisfying and sustainable? In this book, long-time landscape designer Judy Nauseef shows gardeners in the upper Midwest how to restore habitat and diversity to their piece of the planet by making native plants part of well-designed, thoughtfully planned gardens. In contrast to most books about gardening with native plants, Nauseef provides specific regional information. Working against the backdrop of habitat and species losses in the tallgrass prairie states, she brings years of experience to creating landscapes that recall the now-vanished grasslands of the Midwest. Nauseef emphasizes the need for

Careful planning and design to create comfortable, low-maintenance spaces that bring homeowners outside. Her designs solve problems such as a lack of privacy, shade, or sun; plan for water use; replace troublesome nonnative plants with native plants that attract pollinators; and enable homeowners to enjoy living sustainably on their land. Colorful photographs of projects around the Midwest show the wide range of possibilities, from newly created gardens using only native plants to traditional gardens that mix nonnative with native species. Whether you have a city yard, a suburban lot, or a rural acreage, there are ideas here for you, along with examples of well-designed landscapes in which native plants enhance paths, patios, pergolas, and steps. Providing information on planting and maintaining native plants and prairies as well as seed and plant sources, organizations, and public arboretum and prairie sites, this book enables every gardener to master a new palette of plants and landforms. However small our personal landscapes, together they can slow the loss of many species of plants and wildlife and bring

native flowers and grasses back where they belong. Ecologists, landscape architects and designers, master gardeners, landscape contractors, teachers, and home gardeners—everyone dedicated to conserving and improving our environment—will benefit from Nauseef’s approach.

The Pollinator Victory Garden-Kim Eierman
2020-01-07 The passion and urgency that

inspired WWI and WWII Victory Gardens is needed today to meet another threat to our food supply and our environment—the steep decline of pollinators. The Pollinator Victory Garden offers practical solutions for winning the war against the demise of these essential animals. Pollinators are critical to our food supply and responsible for the pollination of the vast majority of all flowering plants on our planet. Pollinators include not just bees, but many different types of animals, including insects and mammals. Beetles, bats, birds, butterflies, moths, flies, and wasps can be pollinators. But, many pollinators are in trouble, and the reality is that most of our landscapes have little to offer them. Our residential and commercial landscapes are filled with vast green pollinator deserts, better known as lawns. These monotonous green expanses are ecological wastelands for bees and other pollinators. With The Pollinator Victory Garden, you can give pollinators a fighting chance. Learn how to transition your landscape into a pollinator haven by creating a habitat that includes pollinator nutrition, larval host plants for

butterflies and moths, and areas for egg laying, nesting, sheltering, overwintering, resting, and warming. Find a wealth of information to support pollinators while improving the environment around you:

- The importance of pollinators and the specific threats to their survival
- How to provide food for pollinators using native perennials, trees, and shrubs that bloom in succession
- Detailed profiles of the major pollinator types and how to attract and support each one
- Tips for creating and growing a Pollinator Victory Garden, including site assessment, planning, and planting goals
- Project ideas like pollinator islands, enriched landscape edges, revamped foundation plantings, meadowscapes, and other pollinator-friendly lawn alternatives

Douglas W. Tallamy's first book, *Bringing Nature Home*, awakened thousands of readers to an urgent situation: wildlife populations are in decline because the native plants they depend on are fast disappearing. His solution? Plant more natives. In this new book, Tallamy takes the next step and outlines his vision for a grassroots

approach to conservation. *Nature's Best Hope* shows how homeowners everywhere can turn their yards into conservation corridors that provide wildlife habitats. Because this approach relies on the initiatives of private individuals, it is immune from the whims of government policy. Even more important, it's practical, effective, and easy—you will walk away with specific suggestions you can incorporate into your own yard. If you're concerned about doing something good for the environment, *Nature's Best Hope* is the blueprint you need. By acting now, you can help preserve our precious wildlife—and the planet—for future generations.

The California Native Landscape-Greg Rubin
2013-03-05 Water shortages and water rationing are commonplace throughout California, rendering expanses of lawn and thirsty, nonnative plants unsustainable. *The California Native Landscape* addresses both concerns by showing homeowners how to succeed with natives and showing them how lush, colorful, and

thriving their landscape can be. The authors stress the importance of smart garden design and combining the right plants to promote the natural symbiosis that occurs within plant communities. Native plants also play an important role in creating fire-resistant landscapes, and this new book has cutting-edge information on this crucial topic, refuting the myth that natives are more fire-prone than nonnatives. With its unique combination of

proven techniques, environmental wisdom, and inspiring design advice, this is an essential resource for all California gardeners who want to create a beautiful, ecologically appropriate, and resource-conserving home landscape.
