The Shape of a Life-Shing-Tung Yau 2019-02-19 A Fields medalist recounts his lifelong transnational effort to uncover the geometric shape—the Calabi-Yau manifold—that may store the hidden dimensions of our universe. Harvard geometer and Fields medalist Shing-Tung Yau has provided a mathematical foundation for string theory, offered new insights into black holes, and mathematically demonstrated the stability of our universe. In this autobiography, Yau reflects on his improbable journey to becoming one of the world's most distinguished mathematicians. Beginning with an impoverished childhood in China and Hong Kong, Yau takes readers through his doctoral studies at Berkeley during the height of the Vietnam War protests, his Fields Medal-winning proof of the Calabi conjecture, his return to China, and his pioneering work in geometric analysis. This new branch of geometry, which Yau built up with his friends and colleagues, has paved the way for solutions to several important and previously intransigent problems. With complicated ideas explained for a broad audience, this book offers readers not only insights into the life of an eminent mathematician, but also an accessible way to understand advanced and highly abstract concepts in mathematics and theoretical physics.

The Shape of Life-Rudolf A. Raff 2012-12-14 Rudolf Raff is recognized as a pioneer in evolutionary developmental biology. In their 1983 book, *Embryos, Genes, and Evolution*, Raff and co-author Thomas Kaufman proposed a synthesis of developmental and evolutionary biology. In *The Shape of Life*, Raff analyzes the rise of this new experimental discipline and lays out new research questions, hypotheses, and approaches to guide its development. Raff uses the evolution of animal body plans to exemplify the interplay between developmental mechanisms and evolutionary patterns. Animal body plans emerged half a billion years ago. Evolution within these body plans during this span of time has resulted in the tremendous diversity of living animal forms. Raff argues for an integrated approach to the study of the intertwined roles of development and evolution involving phylogenetic, comparative, and functional biology. This new synthesis will interest not only scientists working in these areas, but also paleontologists, zoologists, morphologists, molecular biologists, and geneticists.

Marx's Fate-Jerrold Seigel 2010-11 Marx's Fate is an intellectual biography of Marx that combines historical, textual and psychological analyses to provide major new insights into the philosopher's writings and development.

The Geometry of Wealth-Brian Portnoy 2018-06-11 How does money figure into a happy life? In *The Geometry of Wealth*, behavioral finance expert Brian Portnoy delivers an inspired answer, building on the critical distinction between being rich and being wealthy. While one is an unsatisfying treadmill, the other is the ability to underwrite a meaningful life, however one chooses to define that. Truly viewed, wealth is funded contentment. At the heart of this groundbreaking perspective, Portnoy takes readers on a journey toward wealth, informed by disciplines ranging from

ancient history to modern neuroscience. He contends that tackling the big questions about a joyful life and tending to financial decisions are complementary, not separate, tasks. These big questions include: • How is the human brain wired for two distinct experiences of happiness? And why can money "buy" one but not the other? • What are the touchstones of a meaningful life, and are they affordable? • Why is market savvy among the least important sources of wealth but self-awareness is among the most? • How does one strike a balance between striving for more while being content with enough? This journey memorably contours along three basic shapes: A circle, triangle and square help us to visualize how we adapt to evolving circumstances, set clear priorities, and find empowerment in simplicity. In this accessible and entertaining book, Portnoy reveals that true wealth is achievable for many - including those who despair it is out of reach - but only in the context of a life in which purpose and practice are thoughtfully calibrated.

The Shape of Inner Space-Shing-Tung Yau 2010 Argues that geometry is fundamental to string theory--which posits that we live in a 10-dimensional existence--as well as the very nature of the universe, and explains where mathematics will take string theory next.

Life and Shape-Richard Joseph Neutra 2009 Since he followed it all of his life, Richard Neutra (1892-1970) must have relished the maxim of the Greek philosopher Socrates: "The unexamined life is not worth living." In his books, articles, lectures, correspondence, and even casual conversations, Neutra constantly examined, not only his own life, but the lives of others - present and past - and the human and natural world they inhabited. Nowhere was this truer than in his autobiography "Life and Shape", first published in 1962, which now, after years of being out of print, has again happily come back to life. As opposed to "Survival Through Design" (1954), his superb collection of densely philosophical essays, Neutra took a different tack in "Life and Shape", following a lighter and more deliberately relaxed approach. It was as if the usually serious and intense Neutra was giving himself permission to reveal his richly ironic sense of humor and to probe areas in his personal experience which he had not examined as closely before. These included hitherto unrecorded memories of his parents,

siblings, and his childhood and education in imperial Vienna, his numbing experiences as an Austrian artillery officer in World War I, and the beginnings of his architectural consciousness in his response to the work of Otto Wagner, Adolf Loos, Erich Mendelsohn, Louis Sullivan, and Frank Lloyd Wright. As in the autobiographies of Sullivan and Wright, "Life and Shape" concentrates on Neutra's earlier years, both in Europe and America. While he naturally recounts his memories of such well-known commissions as the Lovell Health House (1929), his own Van der Leeuw Research House (1933) and the von Sternberg House (1935), he also muses on such less famous buildings as the small, and now virtually forgotten, Mosk House (1933). "Life and Shape" also confirms Neutra's obsession with the passage of time and his firm resolution never to waste it. Like Sullivan and Wright, Neutra eschewed writing a factual chronicle, and - at the age of 70 - composed instead a meditation on the aspects of his life and work that seemed, in retrospect, to be the most interesting and significant. He felt no need to try to "include everything" but rather to present an honest recounting of his memory of his life. In writing my own "Richard Neutra and the Search for Modern Architecture" [Oxford University Press, 1982; Rizzoli Press, 2006], I relied on "Life and Shape" when I wanted an account of Neutra's experiences told in his own authentic voice. For future generations of architects, historian, and readers, it is good to have it back. - Thomas S. Hines, UCLA Professor Emeritus of History and Architecture

The Shape of Family-Shilpi Somaya Gowda 2020-03-17 NATIONAL & INTERNATIONAL BESTSELLER Named a book not to miss by USA Today * Chicago Sun-Times * New York Post "Deeply involving....Rings so true." -- Emma Donoghue, bestselling author of Room From the international bestselling author of Secret Daughter and The Golden Son comes a poignant, unforgettable novel about a family's growing apart and coming back together in the wake of tragedy. "The Shape of Family is a novel about race and culture, parents and siblings, marriage and love, but most of all, it's about finding hope after darkness. Shilpi Somaya Gowda is a compassionate and wise storyteller who keeps us riveted from beginning to end." -- Jean Kwok, New York Times bestselling author of Girl in Translation The Olander family embodies the modern American Dream in a globalized world. Jaya, the cultured daughter of an Indian diplomat and Keith, an ambitious banker from middle-class Philadelphia, meet in a London pub in 1988 and make a life together in suburban California. Their strong marriage is built on shared beliefs and love for their two children: headstrong teenager Karina and young son Prem, the light of their home. But love and prosperity cannot protect them from sudden, unspeakable tragedy, and the family's foundation cracks as each member struggles to seek a way forward. Jaya finds solace in spirituality. Keith wagers on his high-powered career. Karina focuses relentlessly on her future and independence. And Prem watches helplessly as his once close-knit family drifts apart. When Karina heads off to college for a fresh start, her search for identity and belonging leads her down a dark path, forcing her and her family to reckon with the past, the secrets they've held and the weight of their choices. The Shape of Family is an intimate portrayal of four individuals as they grapple with what it means to be a family and how to move from a painful past into a hopeful future. It is a profoundly moving exploration of the ways we all seek belonging—in our families, our communities and ultimately, within ourselves.

Microbes, Music and Me-John Postgate 2013-10-01 John Postgate describes this autobiography as essentially 'a book about doing science', and while it is an entertaining account of his life in the UK and abroad as he rose to international prominence in microbiology, it is also a book about playing and listening to his beloved jazz. Away from lab and lecture hall, Professor Postgate (brother of the late Oliver Postgate, creator of Bagpuss and the Clangers) has taken enormous pleasure in his hobby, playing cornet

over the years with many musicians, some of whom became prominent names in jazz. His articles and reviews for magazines such as Gramophone and Jazz Journal have been as widely appreciated in jazz circles as his contributions to the understanding of certain key microbiological processes, including the sulphur cycle and nitrogen fixation, have been in the world of microbiology.

Entangled Life-Merlin Sheldrake 2020-09-03 'A dazzling, vibrant, vision-changing book. I ended it wonderstruck at the fungal world. A remarkable work by a remarkable writer' Robert Macfarlane, author of Underland The more we learn about fungi, the less makes sense without them. Neither plant nor animal, they are found throughout the earth, the air and our bodies. They can be microscopic, yet also account for the largest organisms ever recorded. They enabled the first life on land, can survive unprotected in space and thrive amidst nuclear radiation. In fact, nearly all life relies in some way on fungi. These endlessly surprising organisms have no brain but can solve problems and manipulate animal behaviour with devastating precision. In giving us bread, alcohol and life-saving medicines, fungi have shaped human history, and their psychedelic properties have recently been shown to alleviate a number of mental illnesses. Their ability to digest plastic, explosives, pesticides and crude oil is being harnessed in breakthrough technologies, and the discovery that they connect plants in underground networks, the 'Wood Wide Web', is transforming the way we understand ecosystems. Yet over ninety percent of their species remain undocumented. Entangled Life is a mind-altering journey into a spectacular and neglected world, and shows that fungi provide a key to understanding both the planet on which we live, and life itself. 'One of those rare books that can truly change the way you see the world around you. Astounding' Helen MacDonald, author of H Is for Hawk

Shape of My Life-D. C. Renee 2017-01-22 I was dating Grennan Larter. The Grennan Larter, lead singer and guitarist of The Rising Sun. It had happened so fast, but somehow, plain old Brooklyn Cooper had captured the rock star. It was wonderful and fun; he was caring, attentive, and as cliché as it was, he thought I was the rising sun ... and setting sun, and everything in between. I was in love and so was he. And then it all fell apart. All I thought I knew ... well ... let's just say I wasn't sure I could trust myself anymore. I had a war waging in my head, and I wasn't sure who would win, or rather, who I wanted to win. I felt like I was going crazy. And then it all finally clicked. I finally understood why my life had gone in the direction it had. It was the shape of my life.
