It is your totally own grow old to feint reviewing habit. accompanied by guides you could enjoy now is **The Mind's Eye** below.

The Mind's Eye - Oliver Sacks 2010-10-26 From the author of the #1 national bestselling Musicophilia comes a truly visionary book: an exploration of the remarkable, unpredictable ways that our brains cope with the loss of sight by finding new forms of perception to create worlds as complete and rich as the no-longer-visible world. Following the phenomenal success of his international bestseller Musicophilia, the inimitable Oliver Sacks returns with another book on the extraordinary interaction between our brain and our senses — in this case, vision. In The Mind’s Eye, Sacks examines questions ranging from the primary experiences of how we perceive depth or color or motion to the complex matter of how different individuals have varied ways of thinking and experiencing or recreating the visual world. Like The Man Who Mistook His Wife for a Hat and An Anthropologist on Mars, Sacks’s new book is based primarily on individual stories — including Sacks’s own experience of an ocular tumor that left him unable to perceive depth. As always, he embeds these case histories in a rich historical and scientific context. Sacks goes beyond basic vision to explore perception, hallucination and the power of visualization, as well as the ocular effects of migraine, epilepsy and other conditions. Oliver Sacks is our perfect guide to the visual world, a realm that, it turns out, is much, much more complicated than we could have imagined.

The Mind's Eye - Ralph Radach 2003-06-05 The book provides a comprehensive state-of-the-art overview of current research on cognitive and applied aspects of eye movements. The contents include peer-reviewed chapters based on a selection of papers presented at the 11th European Conference on Eye Movements (Turku, Finland 2001), supplemented by invited contributions. The ECEM conference series brings together researchers from various disciplines with an interest to use eye-tracking to study perceptual and higher order cognitive functions. The contents of the book faithfully reflect the scope and diversity of interest in eye-tracking as a fruitful tool both in basic and applied research. It consists of five sections: visual information processing and saccadic eye movements; empirical studies of reading and language production; computational models of eye movements in reading; eye-tracking as a tool to study human-computer interaction; and eye movement applications in media and communication research. Each section is concluded by a commentary chapter by one of the leading authorities in the field. These commentaries discuss and integrate the contributions in the section and provide an expert view on the most significant present and future developments in the respective areas. The book is a reference volume including a large body of new empirical work but also principal theoretical viewpoints of leading research groups in the field.

The Mind's Eye - Henri Cartier-Bresson 1999 The first compilation of writings by a master of photography. One of the leading lights in photography of the twentieth century, Henri Cartier-Bresson is also a shrewd observer and critic. His writings on photography and photographers, which have appeared sporadically over the past forty-five years, are gathered here for the first time. Several have never before appeared in English. The Mind’s Eye features Cartier-Bresson’s famous text on "the decisive moment" as well as his observations on Moscow, Cuba, and China during turbulent times, which ring with the same immediacy and visual intensity that he brings to his photography. Cartier-Bresson remains as direct and insightful as ever in his writings. His commentary on photographer friends he has known—including Robert Capa, André Kertész, Ernst Haas, and Sarah Moon—reveal the impassioned and compassionate vision for which Cartier-Bresson is beloved.

The Mind's Eye - Paul Fleischman 2013-12-17 Eighty-eight-year old Elva and Courtney, an attractive sixteen-year-old with a severed spinal cord, lie in adjacent beds in a grim Bismarck, North Dakota convalescent home. Ignored by the world, the only resource they have left is their imagination. As Elva and Courtney go on a fantasy trip to Italy (accompanied by Elva’s long dead husband and guided by a 1910 travel book), Elva shows Courtney a new way to envision love. But to accept it, and the gift of the imagination, Courtney must make the trip her own—even if she destroys the art Elva holds most dear. Written entirely in dialogue, The Mind’s Eye can be performed as reader’s theater, but it is a fully satisfying novel. In this extraordinarily innovative, profound, and yet readable book Paul Fleischman makes us all feel what a powerful—and dangerous—tool the imagination can be.

The Mind's Eye - Ian Robertson 2011-04-30 A picture is worth a thousand words, or so they say. Yet our world, our civilisation has grown up on a foundation of words - laws, constitutions, treaties, charters, creeds - words that have tamed and liberated in equal measure. Our education, from earliest childhood, emphasises the importance of words. We take the world before our eyes and define it in a verbal language, and in so doing we capture it, understand it, celebrate it. But there are costs. In our reliance on the cold efficiency of language we have neglected the wordless ways of the brain. The uniquely complex human mind is capable of the most exquisite images and visions. But visualisation is not merely about sight and the imagined, it is about the way we interact with the world through our five senses. In THE MIND’S EYE Ian Robertson demonstrates how we are underutilising our brain’s powers of visualisation. Taking the lessons of hard science, he explains how the brain works and how important visualisation can be. But more importantly, how we can all unleash the awesome power of our brains. Following simple exercises Ian Robertson describes how visualisation can: improve memory and learning power be the key to creative thinking and problem solving offer powerful ways of combating stress fight physical illness and pain enrich musical and artistic experience enhance sporting skill and strength In his trademark accessible and imaginative style, Ian Robertson brings to life the hidden workings of the brain, and teaches us all how we can best capitalise on our innate abilities. A must read for anyone interested in how the brain works, or unlocking our mind’s full potential.

Engineering and the Mind's Eye - Eugene S. Ferguson 1992 The things that engineers design are everywhere, and the influence that engineershave on daily life is far out of proportion to their numbers. In this expanded version of aremarkable essay published in Science more than a decade ago, Eugene Ferguson takes a probing lookat the process of engineering design, arguing that despite modern technical advances, goodengineering is still as much a matter of intuition and nonverbal thinking as of equations andcomputation.Ferguson, who has been successively a mechanical engineer, a technical museum curator,and a teacher of the history of technology, uses examples ranging from the development of theAmerican axe to the collapse of the Hartford Coliseum and the performance of the Hubble spacetelescope to illustrate the ways in which visual thinking enriches engineering and the ways in whichengineering that relies solely on technical sophistication can go wrong. He argues that a system ofengineering education that ignores this heritage of nonverbal thinking will produce engineers whoare dangerously ignorant of the many ways in which the real world differs from the mathematicalmodels constructed in academic minds.In Engineering and the Mind’s Eye, Ferguson discusses thenature of engineering design and traces the development of visual and other nonverbal thinking,offering examples of how engineers and other technologists have used such strategies since theRenaissance. Accompanying these examples, and demonstrating the ways in which engineers have sharedtheir knowledge, is a parallel text of illustrations showing how visual thinking has been expressedover the past five centuries. Ferguson concludes his provocative account by arguing that engineeringeducation since 1945 has been skewed toward analytical techniques - which are easiest to teach andevaluate - and away from the art of engineering design as taught by experienced engineers.EugeneFerguson is Professor of History Emeritus at the University of Delaware.

The Mind's Eye - Judith Mason 2016-02-01 This is not a how-to book. It is a how-to-think-about-how-to book. In it I bombard you with images and metaphors with never a photograph or diagram in sight. Your mind’s eye will create all the images in this text, and each mind is unique. Getting these, and other images, down on paper will provide you with fun, frustration, joy and despair. Like life. -- Judith Mason

The Mind's Eye - Marian M. MacCurdy 2007 In the post 9/11 world, therapeutic writing has become a topic of interest in academic circles and the press. This work investigates the relationship between writing and trauma, examines how we process difficult experiences and how writing can help us to integrate them, and provides a pedagogy to deal with the difficult life stories.

In the Mind's Eye - National Research Council 1992-02-01 The archer stands and pulls back the bow, visualizing the path of the arrow to the target. Does this mental exercise enhance performance? Can we all use such techniques to improve performance in our daily lives? In the Mind’s Eye addresses these and other intriguing questions. This volume considers basic issues of performance, exploring how techniques for quick learning affect long-term retention, whether an expert’s behavior can serve as a model for beginners, if team performance is the sum of individual members’ performances, and whether subliminal learning has a basis in science. The book also considers meditation and some other pain control techniques. Deceit and the ability to detect deception are explored in detail. In the area of self-assessment techniques for career development, the volume evaluates the widely used Myers-Briggs Type Indicator.

The Mind's Eye - Douglas E. Richards 2014-01 Nick Hall awakens to find that he has brain implants that allow him to surf the web and read minds. As he tries to find out who did this to him and why, and stay alive, he learns that his actions could be catastrophic for civilization.

Opening the Mind's Eye - Ian Robertson 2007-04-01 Ian Robertson has always been fascinated by how the mind makes images, for that awesome power directly and deeply affects our lives. All of us "visualize" the world differently, and how we do so dictates the way we feel, remember, and think--and therefore our health, memory, and creativity. In this lively, accessible and fascinating book, Robertson explains that most of us employ language as a basis for visualization. In effect, we think in words more than in images. The result is an imbalance between the logical and the intuitive, between imagery-based thought and language-based thought. Opening the Mind’s Eye is both an enlightening and stimulating explanation of how we "see," and a compelling argument for extending the mind’s powers to improve the quality of our lives. Like Daniel Goleman’s Emotional Intelligence, it combines insight and application.

Journey Into the Mind's Eye - Lesley Blanch 2018-07-10 A stunning tale set in England, Paris, and Moscow, chronicling Blanch’s love for an older Russian man and the passionate obsession that takes her to Siberia and beyond. “My book is not altogether autobiography, nor altogether travel or history either. You will just have to invent a new category,” Lesley Blanch wrote about Journey into the Mind’s Eye, a book that remains as singularly adventurous and intoxicating now as when it first came out in 1968. Russia seized Lesley Blanch when she was still a child. A mysterious traveler—swathed in Siberian furs, bearing Fabergé eggs and icons as gifts along with Russian fairy tales and fairy tales of Russia—came to visit her parents and left her starry-eyed. Years later the same man returned to sweep her off her feet. Her love affair with the Traveller, as she calls him, transformed her life and fueled an abiding fascination with Russia and Russian culture, one that would lead her to dingy apartments reeking of cabbage soup and piroshki on the outskirts of Paris in the 1960s, and to Siberia and beyond.

SciFi in the Mind's Eye - Margret Grebowicz 2007 From the Publisher: What does our favorite science fiction tell us about the culture of science? What do stories of cyborg women and genetic engineering show us about how science and values interact and how science and politics affect each other? In SciFi in the Mind’s Eye, leading scholars look at the way science fiction informs and inspires contemporary research in science and technology, and how scientific breakthroughs spur authors on to yet more creative science fiction narratives. Alongside investigations into the meaning of science fiction, SciFi in the Mind’s Eye gives us previously unpublished ‘interventions’ by acclaimed science fiction authors L. Timmel Duchamp, Nicola Griffith, Nancy Kress, Terry Bisson, and Stanislaw Lem.

A Journey Round My Skull - Frigyes Karinthy 2008 The distinguished Hungarian author Frigyes Karinthy was sitting in a Budapest café, wondering whether to write a long-planned monograph on modern man or a new play, when he was disturbed by the roaring—so loud as to drown out all other noises—of a passing train. Soon it was gone, only to be succeeded by another. And another. Strange, Karinthy thought, it had been years since Budapest had streetcars. Only then did he realize he was suffering from an auditory hallucination of extraordinary intensity. What in fact Karinthy was suffering from was a brain tumor, not cancerous but hardly benign, though it was only much later—after spells of giddiness, fainting fits, friends remarking that his handwriting had altered, and books going blank before his eyes—that he consulted a doctor and embarked on a series of examinations that would lead to brain surgery. Karinthy’s description of his descent into illness and his observations of his symptoms, thoughts, and feelings, as well as of his friends’ and doctors’ varied responses to his predicament, are exact and engrossing and entirely free of self-pity. A Journey Round My Skull is not only an extraordinary piece of medical testimony, but a powerful work of literature—one that dances brilliantly on the edge of extinction.

Mind's Eye - Hakan Nesser 2008-06-10 International Bestseller Håkan Nesser is firmly established as one of the world’s bestselling crime novelists. And now the novel that introduced Chief Inspector Van Veeteren is available for the first time in English. The swift conviction left Van Veeteren uneasy: Janek Mitter woke one morning with a brutal hangover and his wife dead in the bathtub. With only the flimsiest defense, he is found guilty and imprisoned in a mental institution. But when Mitter is murdered in his bed, Van Veeteren regrets not following his gut and launches an investigation into the two murders. As the chief inspector delves deeper, the twisted root of these violent murders will shock even him.

In My Mind's Eye: A Thought Diary - Jan Morris 2019-01-01 Riffing on cats and Brexit, the Royals and the annoyances of aging, the nonagenarian Jan Morris delights with her wickedly hilarious first-ever diary collection. Celebrated as the “greatest descriptive writer of her time” (Rebecca West), Jan Morris has been dazzling readers since she burst on the scene with her on-the-spot reportage of the first ascent of Everest in 1953. Now, the beloved ninety-two-year-old, author of classics such as Venice and Trieste, embarks on an entirely new literary enterprise—a collection of daily diaries, penned over the course of a single year. Ranging widely from the idyllic confines of her North Wales home, Morris offers diverse sallies on her preferred form of exercises (walking briskly), her frustration at not recognizing a certain melody humming in her head (Beethoven’s Pathétique, incidentally), her nostalgia for small-town America, as well as intimate glimpses into her home life. With insightful quips on world issues, including Britain’s “special relationship” with the United States and the #MeToo movement, In My Mind’s Eye will charm old and new Jan Morris fans alike.

In the Mind's Eye-Mary A. Peterson 2007-01-04 How can we best describe the processes by which we visually perceive our environment? Contemporary perceptual theory still lacks a coherent theoretical position that encompasses both the limitations on the information that can be retained from a single eye fixation and the abundant phenomenal and behavioral evidence for the perception of an extended and coherent world. As a result, many leading theorists and researchers in visual perception are turning with new or renewed interest to the work of Julian Hochberg. For over 50 years, in his own experimental research, in his detailed consideration of examples drawn from a wide range of visual experiences and activities, and most of all in his brilliant and sophisticated theoretical analyses, Hochberg has persistently engaged with the myriad problems inherent in working out the kind of coherent theoretical position the field currently lacks. The complexity of his thought and the wide range of areas into which Hochberg has pursued the solution to this central problem have, however, limited both the accessibility of his work and the appreciation of his accomplishment. In this volume we seek to bring the full range of Hochberg's work to the attention of a wider audience by offering a selection of his key works, many taken from out-of-print or relatively inaccessible sources. To facilitate the understanding of his accomplishment, and of what his work has to offer to contemporary researchers and theorists in visual perception, we include commentaries on salient aspects of his work by 20 noted researchers. In the Mind's Eye will be of interest to researchers working on topics such as perceptual organization, visual attention, space perception, motion perception, visual cognition, the relationship between perception and action, picture perception, and film, who are striving to obtain a deeper understanding of their own fields, and who want to integrate this understanding into a broader, unified view of visual perceptual processing.

A Smile in the Mind's Eye-Lawrence Durrell 2012-06-12 The “virtuoso” author’s memoir of his spiritual journey with famed Taoist philosopher Jolan Chang (The New York Times). Beginning with their first meeting over lunch at Lawrence Durrell’s Provencal home, Durrell and Jolan Chang—renowned Taoist philosopher and expert on Eastern sexuality—developed an enduring relationship based on mutual spiritual exploration. Durrell’s autobiographical rumination on their friendship and on Taoism recounts the author’s existential ponderings, starting with his introduction to the mystical and enigmatic “smile in the mind’s eye.” From parsimony, cooking, and yoga to poetry, Petrarch, and Nietzsche, A Smile in the Mind’s Eye is a charming tale of a writer’s spiritual and philosophical awakening.

Social Work and the Visual Imagination-Lynn Froggett 2020-06-30 Images are inscribed in the memory more easily than words, and some remain with the viewer for a lifetime. Combining hindsight, insight and foresight, the chapters in this book turn a spotlight onto various aspects of health, social work and socially engaged arts practice. The visual imagination is evoked in this book to help practitioners see beneath the surface of contentious and problematic issues facing human services today. Risk assessment, child sexual abuse, work-life balance, old age, dementia, substance misuse, recovery, sex work, homelessness, isolation, biography, death and dying, grief, loss, vulnerability, care, and the function of the museum as a preserver of memory, all come under the sustained gaze and examination of the contributors. Grounded in the arts and humanities, the visual sense as a gateway to empathy is explored throughout these chapters. References are included to visual art, curating dramatic performance, poetry, film, dance, photography, diary entries, and public exhibitions. In an age when people increasingly compose their lives by staring into various screens, this book celebrates the visual modality that can humanise services with ‘human-seeings’. This book was originally published as a special issue of the Journal of Social Work Practice.

The Mind's Eye-Kevin Clark 2007-10 The Mind's Eye, written by a published poet, focuses on imagery and sound and has the added benefit of being concise, inexpensive, and handy. Contemporary poetry as well as traditional form is discussed, with an emphasis on contemporary poets -- more than ninety of them -- and three student poets. Chapters deal with difficult topics such as racism, war, mortality, gender, and more.

The Mind's Eye-Perry Prete 2018-01-17 Nicole Blake is a quiet girl, the type of person who is seldom noticed by anyone, until one day she discovers she has the unique ability to see images move on photographs. At first, she uses her ability to entertain friends at parties and work. Meanwhile, the police are unable to uncover a single clue in a series of unsolved murders. Seasoned detective Paul Hammond learns of Nicole's ability, and enlists her help. Carl Kadner, a rookie reporter with the local paper, takes it upon himself to investigate the murders as well. As he learns what it takes to be the kind of reporter he wants to be, Carl puts himself in danger for the sake of the story. What will it take to bring all of these people together to find the real reason people continue to disappear?

In the Mind's Eye-April Nowell 2001-01-01 The last decade has witnessed a sophistication and proliferation in the number of studies focused on the evolution of human cognition, reflecting a renewed interest in the evolution of the human mind in anthropology and in many other disciplines. The complexity and enormity of this topic requires the coordinated efforts of many researchers. This volume brings together the disciplines of palaeontology, psychology, anatomy, and primatology. Together, they address a number of issues, including the evolution of sex differences in spatial cognition, the role of archaeology in the cognitive sciences, the relationships between brain size, cranial reorganization and hominid cognition, and the role of language and information processing in human evolution.

In the Mind's Eye-Thomas G. West 2009 Dyslexia and other learning differences are commonly seen as disabilities, but they must also be seen as distinctive abilities, different (and often superior) modes of perceiving and understanding the world. As Thomas West shows, some of our greatest minds, from Einstein and Edison to Churchill and da Vinci, have been visual thinkers who today might be labeled 'learning disabled.' In the Mind's Eye makes a powerful case that the dyslexic-visual mind may be full of creative human potential, and is as crucial a part of our cognitive heritage as any other.-Oliver Sacks, MD, Professor of Neurology and Psychiatry, Columbia University Medical Center; Columbia University Artist; Author of Musicophilia, Awakenings, and The Man Who Mistook His Wife for a HatThomas West brings to life the fascinating capacities and syndromes that arise from our visual-spatial imagination. His book proves beyond doubt that we are not all points on a single bell curve of intelligence.-Howard Gardner, The John H. and Elisabeth A. Hobbs Professor of Cognition and Education, Harvard Graduate School of Education; Author of many books, including Frames of Mind: The Theory of Multiple Intelligences and Intelligence Reframed: Multiple Intelligences for the 21st CenturyUnfortunately, I did not discover this wonderful book before I wrote Thinking in Pictures several years ago. I recommend it to teachers, parents and education policymakers. West profiles people with dyslexia who are visual thinkers, and his conclusions on the link between visual thinking and creativity are similar to mine.- Temple Grandin, Associate Professor at Colorado State University, Author of the memoir Thinking in Pictures (dealing with her life with autism) and the best-selling Animals in TranslationNow in its fifteenth printing, In the Mind’s Eye has been recognized as a classic in its field. The book still stands alone as a uniquely compelling

argument for the great importance of visual thinking and visual technologies as well as the high creative potential of many individuals with dyslexia or other learning difficulties.In this second edition, Thomas G. West reviews a number of recent developments that support and extend the perspectives and expectations originally set forth in the first edition. In addition to the original eleven portraits of famous individuals with learning difficulties (including Albert Einstein and Thomas Edison), he has added brief profiles of two dyslexic scientists known for their ability to generate, in quite different fields, powerful but unexpected innovations and discoveries: William J. Dreyer, a Caltech professor who used his highly visual imagination to see things in molecular biology and immunology well before others; and John R. (Jack) Horner, who flunked out of the University of Montana seven times (requiring letters of support for readmission) but is now known as one of the three most important paleontologists in the world.Recognized as among the best of the best by the American Library Association in their broad psychology and neuroscience category, this title belongs on the bookshelves of all educators and anyone with an interest in visual thinking, visual technologies, and highly creative people with learning difficulties.Thomas G. West is a writer, lecturer and consultant based in Washington, DC. In connection with In the Mind’s Eye, he has been invited to provide over 200 presentations, interviews and documentary segments for computer, business, education, art, design, scientific and medical groups in the U.S. and fourteen countries overseas.More on In the Mind's Eye can be found at http://inthemindseyedyslexicrenaissance.blogspot.com/.

In My Mind's Eye-Ursula Franke 2017-11-01 "In My Mind's Eye" is the first book about family constellations in individual therapy and counselling. The procedures presented rest on a broad range of therapeutic knowledge and experience from various psychological methods and approaches. In the first section, Ursula Franke describes the foundations of her therapeutic work. The second part addresses the inner processes, questions, and decisions leading to interventions, that guide the therapist through the whole process of a constellation. The main focus is on the techniques of constellations in individual therapy, and on constellations in the imagination, which the author has developed over years of experience and observation.

The Strategic Teacher-Harvey F. Silver 2007-10-15 Are you looking for high-impact, research-based strategies to transform your students into high-achieving and inspired learners? In The Strategic Teacher, you'll find a repertoire of strategies designed and proven to meet today's high standards and reach diverse learners. Twenty reliable, flexible strategies (along with dozens of variations) are organized into these groups of instruction:
*mastery style to emphasize the development of student memory;
*understanding style to expand students' capacities to reason and explain;
*self-expressive style to stimulate and nourish students' imaginations and creativity;
*interpersonal style to help students find meaning in the relationships they forge as partners and team members, united in the act of learning; and
*four-style strategies that integrate all four styles. To guide teachers in delivering content to students, the authors started with the best research-based teaching and learning strategies and created a tool called the Strategic Dashboard. The dashboard provides information about each teaching strategy in a concise, visual profile; it is also designed to document how you incorporate current, highly respected research into your instructional plans. For each strategy, you'll find the following information:
*a brief introduction to the strategy;
*an example of a teacher using the strategy in the classroom;
*the research base supporting the strategy and how the strategy benefits students;
*how to implement the strategy using a list of clear steps;
*guidance through the planning process, providing steps, examples, and suggestions for designing superior lessons; and
*additional tools, strategies, and resources for adapting and expanding the use of each strategy. The authors have combined their years of research and practice to deliver reliable, high-impact, flexible teaching and learning strategies grounded in current, highly regarded research to teachers at all levels of experience. Note: This product listing is for the reflowable (ePub) version of the book.

The Book of Revelation-Timothy Beal 2018-10-23 The life and times of the New Testament’s most mystifying and incendiary book Few biblical books have been as revered and reviled as Revelation. Many hail it as the pinnacle of prophetic vision, the cornerstone of the biblical canon, and, for those with eyes to see, the key to understanding the past, present, and future. Others denounce it as the work of a disturbed individual whose horrific dreams of inhumane violence should never have been allowed into the Bible. Timothy Beal provides a concise cultural history of Revelation and the apocalyptic imaginations it has fueled. Taking readers from the book’s composition amid the Christian persecutions of first-century Rome to its enduring influence today in popular culture, media, and visual art, Beal explores the often wildly contradictory lives of this sometimes horrifying, sometimes inspiring biblical vision. He shows how such figures as Augustine and Hildegard of Bingen made Revelation central to their own mystical worldviews, and how, thanks to the vivid works of art it inspired, the book remained popular even as it was denounced by later church leaders such as Martin Luther. Attributed to a mysterious prophet identified only as John, Revelation speaks with a voice unlike any other in the Bible. Beal demonstrates how the book is a multimedia constellation of stories and images that mutate and evolve as they take hold in new contexts, and how Revelation is reinvented in the hearts and minds of each new generation. This succinct book traces how Revelation continues to inspire new diagrams of history, new fantasies of rapture, and new nightmares of being left behind.

Turning the Mind’s Eye Inward: The Interplay between Selective Attention and Working Memory-Elger Abrahamse 2016-01-21 Historically, cognitive sciences have considered selective attention and working memory as largely separated cognitive functions. That is, selective attention as a concept is typically reserved for the processes that allow for the prioritization of specific sensory input, while working memory entails more central structures for maintaining (and operating on) temporary mental representations. However, over the last decades various observations have been reported that question such sharp distinction. Most importantly, information stored in working memory has been shown to modulate selective attention processing – and vice versa. At the theoretical level, these observations are paralleled by an increasingly dominant focus on working memory as (involving) the attended part of long-term memory, with some positions considering that working memory is equivalent to selective attention turned to long-term memory representations – or internal selective attention. This questions the existence of working memory as a dedicated cognitive function and raises the need for integrative accounts of working memory and attention. The next step will be to explore the precise implications of attentional accounts of WM for the understanding of specific aspects and characteristics of WM, such as serial order processing, its modality-specificity, its capacity limitations, its relation with executive functions, as well as the nature of attentional mechanisms involved. This research topic in Frontiers in Human Neuroscience aims at bringing together the latest insights and findings about the interplay between working memory and selective attention.

Narrative Impact-Melanie C. Green 2003-01-30 The impact of public narratives has been so broad (including effects on beliefs and behavior but extending beyond to emotion and personality), that the stakeholders in the process have been located across disciplines, institutions, governments, and, indeed, across epochs. Narrative Impact draws upon scholars in diverse branches of psychology and media research to explore the subjective experience of public narratives, the affordances of the narrative environment, and the roles played by narratives in both personal and collective spheres. The book brings together current theory and research presented primarily from an empirical psychological and communications perspective, as well as contributions from literary theory, sociology, and censorship studies. To be commensurate with the broad scope of influence of public narratives, the book includes the narrative mobilization of major social movements, the formation of self-concepts in young people, banning of texts in schools, the constraining impact of narratives on jurors in the court room, and the wide use of education entertainment to affect social changes. Taken together, the interdisciplinary nature of the book and its stellar list of contributors set it apart from many edited volumes. Narrative Impact will draw readership from various fields, including sociology, literary studies, and curriculum policy. Providing new explanatory concepts, this book:
*is the first account on the psychology of narrative persuasion and brings together the relevant conceptualizations from within various sectors of psychology together with the major issues that concern cognate disciplines outside of psychology;
*focuses on understanding the mechanisms that underlie the power of public narratives to achieve broad historical and social changes;
*offers breakthroughs to the future: the role of "presence" in virtual reality narratives; the role of "zines" in females' fashioning of their selves; and the central role of imagery in transportation into narrative worlds;
*explains varying roles of emotion in narrative immersion; and
*addresses the growing blurring of fact and fiction: mechanisms and implications for beliefs and behavior.

The Hidden Brain-Shankar Vedantam 2010-01-19 The hidden brain is the voice in our ear when we make the most important decisions in our lives—but we’re never aware of it. The hidden brain decides whom we fall in love with and whom we hate. It tells us to vote for the white candidate and convict the dark-skinned defendant, to hire the thin woman but pay her less than the man doing the same job. It can direct us to safety when disaster strikes and move us to extraordinary acts of altruism. But it can also be manipulated to turn an ordinary person into a suicide terrorist or a group of bystanders into a mob. In a series of compulsively readable narratives, Shankar Vedantam journeys through the latest discoveries in neuroscience, psychology, and behavioral science to uncover the darkest corner of our minds and its decisive impact on the choices we make as individuals and as a society. Filled with fascinating characters, dramatic storytelling, and cutting-edge science, this is an engrossing exploration of the secrets our brains keep from us—and how they are revealed.

The River of Consciousness-Oliver Sacks 2017-10-24 From the best-selling author of *Gratitude*, *On the Move*, and *Musicophilia*, a collection of essays that displays Oliver Sacks's passionate engagement with the most compelling and seminal ideas of human endeavor: evolution, creativity, memory, time, consciousness, and experience. Oliver Sacks, a scientist and a storyteller, is beloved by readers for the extraordinary neurological case histories (*Awakenings*, *An Anthropologist on Mars*) in which he introduced and explored many now familiar disorders--autism, Tourette's syndrome, face blindness, savant syndrome. He was also a memoirist who wrote with honesty and humor about the remarkable and strange encounters and experiences that shaped him (*Uncle Tungsten*, *On the Move*, *Gratitude*). Sacks, an Oxford-educated polymath, had a deep familiarity not only with literature and medicine but with botany, animal anatomy, chemistry, the history of science, philosophy, and psychology. *The River of Consciousness* is one of two books Sacks was working on up to his death, and it reveals his ability to make unexpected connections, his sheer joy in knowledge, and his unceasing, timeless project to understand what makes us human.

Stumbling on Happiness-Daniel Gilbert 2009-02-24 A smart and funny book by a prominent Harvard psychologist, which uses groundbreaking research and (often

hilarious) anecdotes to show us why we’re so lousy at predicting what will make us happy - and what we can do about it. Most of us spend our lives steering ourselves toward the best of all possible futures, only to find that tomorrow rarely turns out as we had expected. Why? As Harvard psychologist Daniel Gilbert explains, when people try to imagine what the future will hold, they make some basic and consistent mistakes. Just as memory plays tricks on us when we try to look backward in time, so does imagination play tricks when we try to look forward. Using cutting-edge research, much of it original, Gilbert shakes, cajoles, persuades, tricks and jokes us into accepting the fact that happiness is not really what or where we thought it was. Among the unexpected questions he poses: Why are conjoined twins no less happy than the general population? When you go out to eat, is it better to order your favourite dish every time, or to try something new? If Ingrid Bergman hadn’t gotten on the plane at the end of *Casablanca*, would she and Bogey have been better off? Smart, witty, accessible and laugh-out-loud funny, *Stumbling on Happiness* brilliantly describes all that science has to tell us about the uniquely human ability to envision the future, and how likely we are to enjoy it when we get there.

You Don't Look Like Anyone I Know-Heather Sellers 2010-10-14 An unusual and uncommonly moving family memoir, with a twist that give new meaning to hindsight, insight, and forgiveness. Heather Sellers is face-blind-that is, she has prosopagnosia, a rare neurological condition that prevents her from reliably recognizing people's faces. Growing up, unaware of the reason for her perpetual confusion and anxiety, she took what cues she could from speech, hairstyle, and gait. But she sometimes kissed a stranger, thinking he was her boyfriend, or failed to recognize even her own father and mother. She feared she must be crazy. Yet it was her mother who nailed windows shut and covered them with blankets, made her daughter walk on her knees to spare the carpeting, had her practice secret words to use in the likely event of abduction. Her father went on weeklong "fishing trips" (aka benders), took in drifters, wore panty hose and bras under his regular clothes. Heather clung to a barely coherent story of a "normal" childhood in order to survive the one she had. That fairy tale unraveled two decades later when Heather took the man she would marry home to meet her parents and began to discover the truth about her family and about herself. As she came at last to trust her own perceptions, she learned the gift of perspective: that embracing the past as it is allows us to let it go. And she illuminated a deeper truth-that even in the most flawed circumstances, love may be seen and felt. Watch a Video
